Signet 0250 and 0252 Software Support for 2751

Georg Fischer Signet recently released the 2751 pH/ORP Smart Sensor Electronics: your current 0250 and 0252 software might not be compatible with the 2751. Older software versions are unable to set the 4 to 20 mA Current Loop span.

A new version of the 0252 software is available at <http://www.gfsignetwebtools.com/0252>. This version is compatible with the 2751 pH/ORP Smart Sensor Electronics, and will allow for the spanning of the pH and ORP 4 to 20 mA current loops.

The new version of the 0252 software also addresses an issue with the programming of the Signet 2551 and 2552 Magmeters.

The new version is a free upgrade for all users of the 0250, 0251, and 0252 software.

The 0252 software supports the 2250, 2350, 2450, 2551, 2552, 2610-40, 2750 and 2751 sensors and the 9900 SmartPro transmitter.
