GF Piping Systems

+GF+

Product Range International

INSTAFLEX iFIT

Table of contents

General information

Al	Aluminium
BF	Butt fusion
Brass	Alloy made of copper and zinc (wetted parts in dezincification resistant quality, DZR brass)
d	Pipe outside diameter
dCu	Copper pipe outside diameter
DN	Nominal bore
EPDM	Ethylene propylene diene monomer (M-class) rubber
EPS	Expanded Polystyrene
EVOH	Ethylene vinyl alcohol
EF	Electro fusion
Gunmetal	Known as red brass in the United States, type of bronze an alloy of copper, tin and zinc
HWS	Heiz-Wendelschweissen, GF Electro fusion system
HMS	Heiz-Muffenschweissen, GF Socket fusion system
Malleable Cast iron	Cast iron that has been toughened by gradual heating or slow cooling
PA-GF	Polyamide glass-fibre reinforced
PB	Polybutene
PE	Polyethylene
PE-HD	Polyethylene, high density
PE-RT	Polyethylene
PE-Xa	Cross-linked polyethylene, using the peroxide (Engel) method, after the installation, PE-Xb has the same properties as PE-Xa
PE-Xb	Cross-linked polyethylene, using the silane method after the installation, PE-Xb has the same properties as PE-Xa
PE-Xc	Cross-linked polyethylene, using the electron beam process
PP	Polypropylene
PPSU	Polyphenylsulfone
s	Wall thickness of the pipe
Ø	Diameter
UBA	Umwelt Bundesamt, Germany
LK	Hole circle
SW	Dimension across flats (A/F)
SF	Socket fusion
G	Pipe thread, not pressure tight in the thread (with flat seat) to ISO 228
R	Taper male thread, pressure tight in the thread to ISO 7
Rp	Parallel female thread, pressure tight in the thread to ISO 7
M	Metric thread to ISO 261
m	Meter
SP	Items per standard pack
g	Gramme

All dimensions are given in mm and are intended as nominal or outside diameter of the pipe. Subject to alteration resulting from modifications in design.

For compressed air applications with air containing mineral oil, EPDM gaskets must be replaced by NBR units.

NBR gaskets are not contained in this Product Range. Please contact the GF Piping Systems sales consultant or sales support office assigned to your sales area.

Technical changes and mistakes reserve.

GF Piping Systems

Building the lifelines of the world

GF Piping Systems is the global specialist for the safe and reliable transportation of water, chemicals, and gas. Customers in more than 100 countries implement our solutions to work more safely, efficiently, and cost-effectively.

Your partner for modern plastic systems

Customers in more than 100 countries are already working with the plastic piping systems that GF Piping Systems introduced more than 60 years ago. They are maintenance-free, resistant to corrosive and aggressive media, and are extremely durable. Their low weight, compared to metal systems, reduces static and logistic requirements. An innovative design and modern jointing technologies allow faster and easier installations. All this helps our customers to work more safely, efficiently, and cost-effectively. Support throughout the transition from metal to plastic systems is a key focus for our specialists.

+ Maintenance-free plastic

Plastics are corrosion-free and maintenance-free. They have excellent chemical resistance and last as long as the system itself, which is more than 25 years.

+ Complete system solutions

Our portfolio of more than 60,000 products offers complete system solutions, meaning you get perfectly matched components from a single source.

+ Local support

GF Piping Systems specialists are located in 34 countries and are therefore always close at hand, meaning that advice and on-site practical assistance is never far away.

+ Partner in all project phases

The specialists from GF Piping Systems support you throughout all phases of your project – starting from the planning stage, right through to commissioning. This reduces both the time required and risks.

+ Many years of experience

GF Piping Systems is a division of Georg Fischer AG, based in Schaffhausen, Switzerland, which was established in 1802. You benefit from our many years of experience.

Building Technology

Individual service for your needs

Customer needs are in the center of whatever GF does. From on-site training to adapted design and tailor-made processes - GF Piping Systems provides individual service which fits customers best.

Value added services

From planning support to implementation – our specialists are always close by

As a leading provider of piping systems in plastic and metal, we offer our customers not only reliable products, but also a large package of services. Our support ranges from a comprehensive technical manual or the extensive CAD library to an international team of experts, who work closely together with local sales companies. And when it comes to implementing a project, our customers additionally benefit from a wide range of training courses, either on site or in our modern training centres worldwide.

Generating a genuinely individual added value for our customers is our ultimate goal when implementing our tailor-made solutions. With our application knowledge and product expertise, we support our customers during the planning process, the sustainable realization of the projects and the provision of services. Our expertise in developing and producing piping systems, combined with our profound industry and market knowledge, based on longstanding experience, makes us a qualified and professional partner for our customers.

1 Chemical resistance
Our specialist teams have decades of experience in the area of chemical resistance. They can offer individual support and advice in selecting the right material for the corresponding system solution. On request, a team will examine and select the appropriate material for special applications.

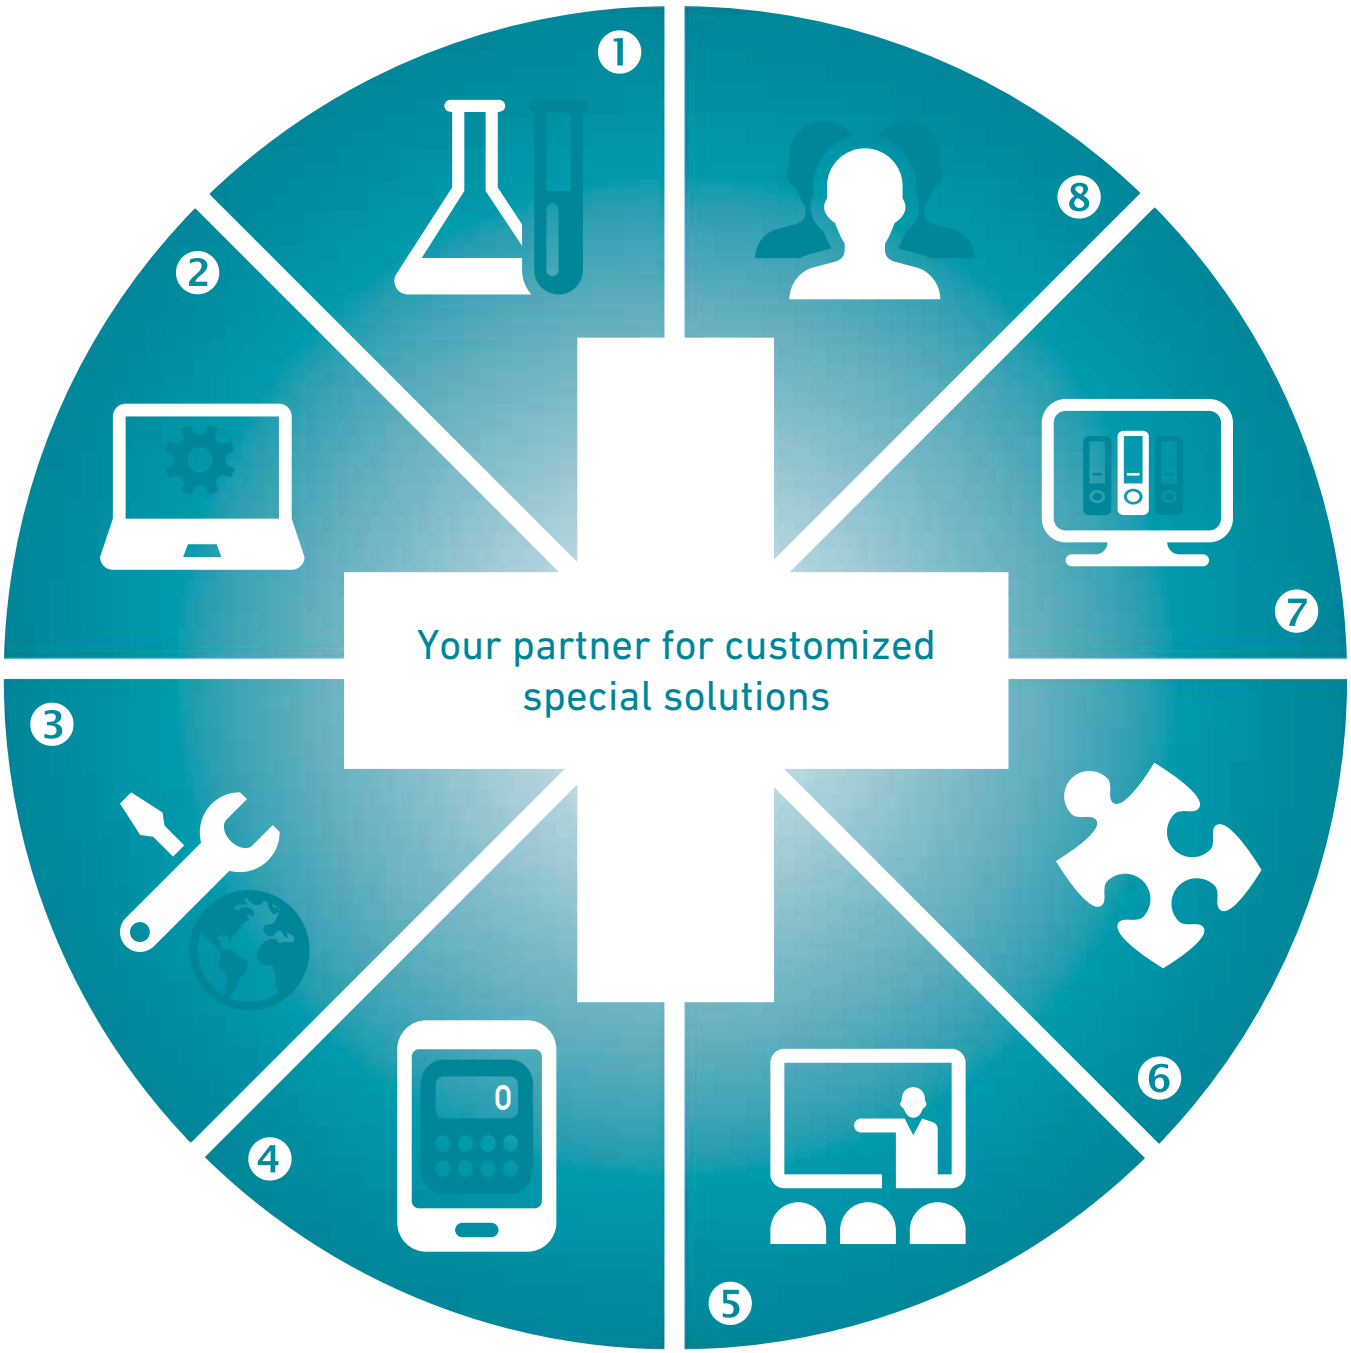
2 CAD library
The extensive CAD library is the most frequently used planning tool at GF Piping Systems. The database comprises over 30 000 drawings and technical data regarding pipes, fittings, measurement and control technology as well as manual and actuated valves. The big advantage of the CAD library is that the data can be integrated directly in CAD models.

3 Technical support
Technical support and material selection are key factors for a successful installation. A team of specialists headquartered in Switzerland is available to support the GF Piping Systems sales companies around the world. For technical advice or for general information, our customers are supported individually by the specialist team in the corresponding sales company.

4 Online and mobile calculation tools
Our numerous, multilingual online calculation tools are very useful for configuring and calculating. By means of pressure / temperature diagrams, the pressure of liquid media recommended for pipes and fittings at various temperatures can be easily defined. FlowCalc App, the mobile application of GF Piping Systems, is an on-site planning tool for pipe diameter and flow velocity calculation to select the right dimension of piping systems when no expert is near by.

5 On-site training
Our experts are available to support our customers locally and conduct training in diverse fusion and jointing techniques on location. The duration and structure of the training depends on the project and the system being installed.

6 Customizing
The customizing teams at GF Piping Systems work closely together around the globe. The focus of these teams is to manufacture custom parts for special systems. In addition, a variety of special solutions can be produced in small series. Standardized processes warrant the highest level of quality for the individual solutions of our customers.



7 Technical manual

For our customers, we have documented the extensive know-how of GF Piping Systems in planning and installing plastic piping systems in our technical manual. This detailed documentation is available in both printed and digital version. The established reference book is helpful in planning large and small projects.

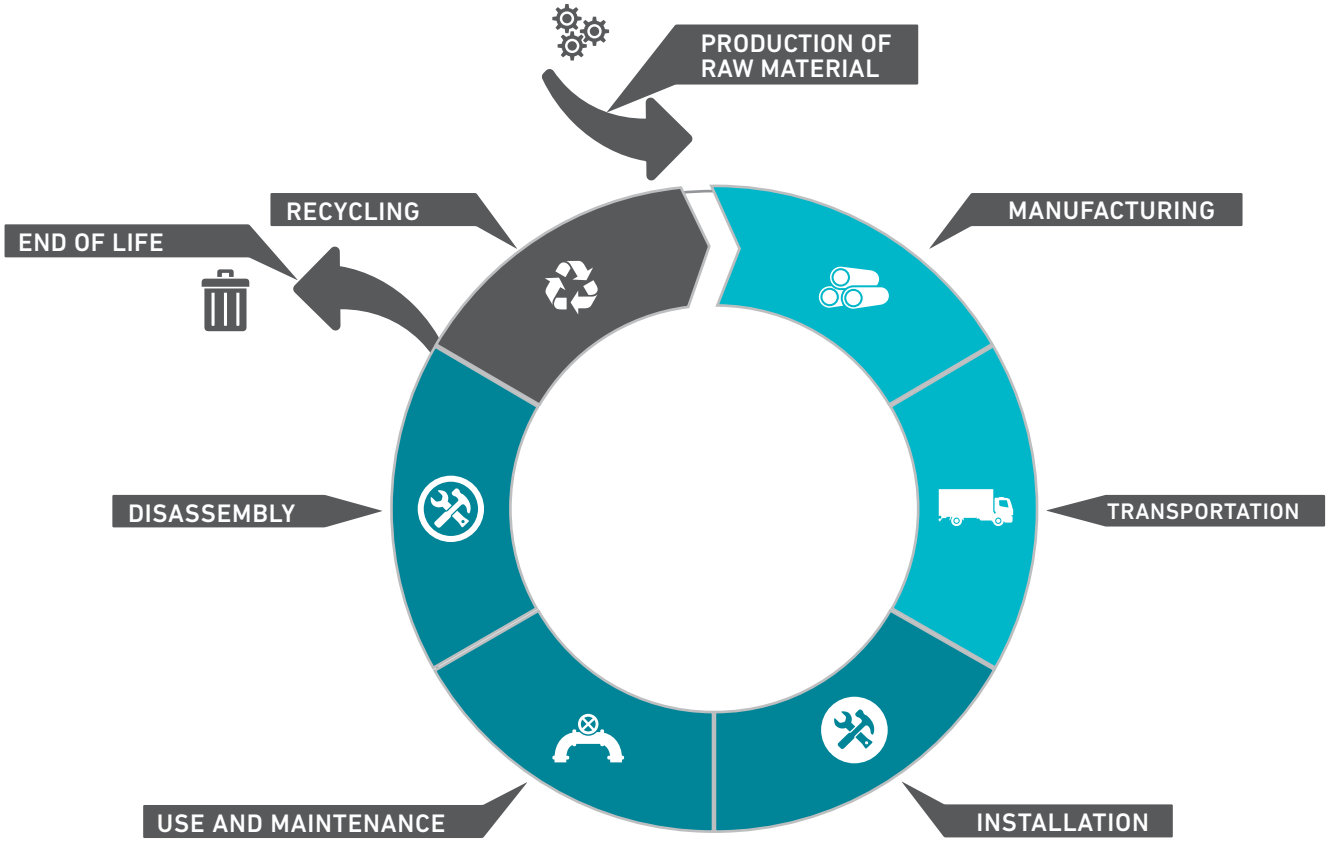
8 Training courses

GF Piping Systems offers a wide range of training courses that allow participants to gain confidence in working with our products and proven jointing technologies. The practical training is clearly defined, structured and adapted to the various levels of participants' experience.

Sustainability

GF Piping Systems incorporates its environmental responsibility into its everyday business activities. Because we understand environmental awareness as one of the corporation‘s core values, all internal structures and processes are geared towards sustainability. We strive to conserve natural resources and work continually towards optimizing the environmental performance of our products and how they are used. Consequently, outstanding material properties and innovative technologies form the basis for our environmentally friendly and energy-saving solutions.

Product Life Cycle



Life Cycle Assessments of GF specific industry systems

GF Piping Systems proactively performs life cycle assessments to determine the environmental impact of its products. In cooperation with an independent institute, life cycle assessments of selected GF Piping Systems specific industry systems were calculated including a PB system for the distribution of hot and cold water on a cruise ship. The life cycle assessments cover the environmental impact over the whole life cycle.

BIM library

GF Piping Systems supports planners, contractors and design engineers using BIM (Building Information Modeling) software from Autodesk.

Due to the industrialization of the building industry, there is a strong demand for digital collaboration across different partners in a project. This can be best achieved when project partners agree on using common standards. As one of the most important goals is to give maximum support to its customers during a design phase, GF Piping Systems offers BIM content for market leading BIM Software.

Where standard Autodesk Revit libraries for the MEP (Mechanical, Electrical & Plumbing) Industry are generic and limited, our GF Piping Systems' BIM content supports an engineer more accurately in the design process. It allows a designer to setup piping systems with reallife dimensions preventing errors and saving time. During an entire process, from initial concept design phase until delivery, an accurate bill of materials is available, showing detailed product information.

Customers' benefits:

- Package delivery
  - Embedded bill of material
  - Complete assortment overview and easy copying into specific project
- Real-life constructionlength
- Embedded article or product number and description
- 3D clearance zone

The first GF BIM library offers the content for COOL-FIT 2.0, INSTAFLEX and JRG Sanipex. GF Piping Systems products' portfolio for Autodesk Revit will be continuously expanded further and could be accessed via http://bim.gfps.com

Environmental product declaration

System

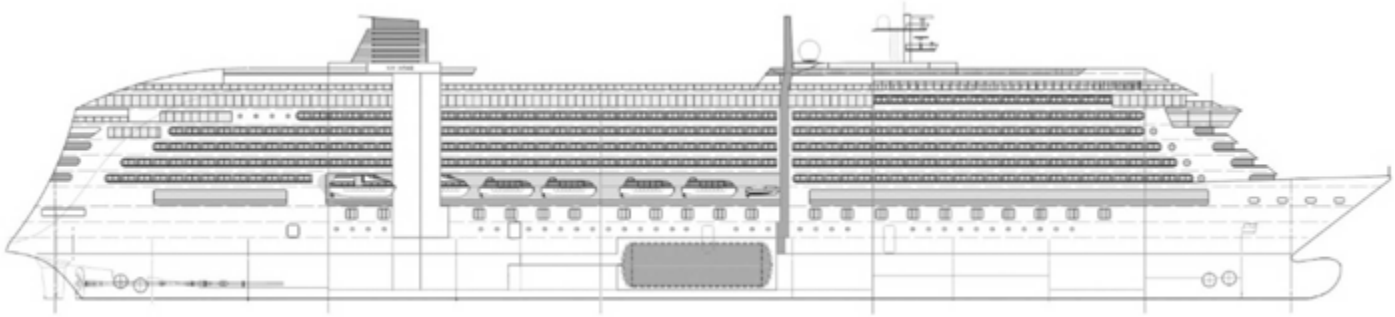
As an abstract of the Life Cycle Assesment (LCA) you will find follwing EPD (Environmental Product Declaration) regarding Polybutene installation. The entire EPD has been made according to ISO 15804 and is available for download on our website: www.gfps.com/sustainability

The analyzed case represents an exemplary system for the transport of fresh water to the cabins of a cruise ship. The installed piping system consists of the dimensions d110 (riser), d50 (decks) and d16 (cabins). The ship which has a length of 340 m comprises 18 decks with a length of 280 m and a total of 1 800 cabins. The system is installed in a dockyard in Turku (Finland). The used jointing technologies are socket welding and electrofusion.

Transferability of results to land based applications

From a piping system perspective, a cruise ship is nothing different than a swimming house. The installed product to provide hot and cold water on a ship are the same as installed in land based applications (like a hotel, hospital or an apartment building) to provide the same service.

The data in the EPD refer exactly to the scope and functional unit defined in the underlying LCA. However, the environmental impacts of an LCA calculated for a land based application would still indacate the product phase and the use phase as the two dominant phases.



Materials

The material of the main pipe system components (pipes and fittings) is PB. The whole system consists of the materials as listed below.

Reference service life time

20 years

Functional unit (FU)

The transport of hot and cold water in a PB piping system on a cruise ship via a riser (d110) and the decks (d50) to the taps of the toilet, shower and sink in the cabins (d16) over the whole lifetime of the system.

Material		Weight (kg)
PB		10 777
Brass		6 397
Plastics (other than PB)		403
Rubber		40
Steel		25
Paper		18
Printed wiring board		7
Other metals		6
Wire		5
Pump	Iron	2 356
	Bronze	398
	Steel	217
	Other metals	33
	Rubber	8
	Neoprene	2
Motor	Steel	1 752
	Other metals	976
	Plastics	19
	Insulation material	18
	Chemicals organic, not specified	9
	Paint	7

The system mainly consists of GF Piping Systems components. However, to complete the system also external components (Ext.) which are not produced by GF Piping Systems are necessary. The calculation of the environmental impact of these products is based on publicly available data and assumptions.

Benefit
Excellent for cold water and chilled applications
Excellent temperature - pressure behaviour
Fire Sprinkler system
Safely conveying hazardous media with process reliability
Safely conveying hazardous media with process reliability
Three-in-One system, excellent properties
Three-in-One system, excellent properties
Safety system to transport hazardous media
UV&weather resistance, flexible and strong at low temperature
Leak free welded system
Resistant to alkalis, alcohols, acids, solvents and salt solutions
Resistant to alkalis, alcohols, acids, solvents and salt solutions
Easy jointing, for all building services applications
Hot and cold water sanitary system, compressed air
Connection to all types of pipes
Corrosion retarding, drinking water friendly
Pigment free polypropylene with smooth surface
High stress fracture-, pressure-, abrasion-, corrosion resistance
Silicon-free or oil-free system with a high pureness factor
Chemical and higher temperature resistant
Easy and fast to joint, very good chemical resistance
Visual monitoring of Process
Hot and cold water system, hygienically perfect
USA coast guard approved piping
High purity, outstanding chemical resistance, UV-resistant
Semi-finished rod/tube/profiles, optimal for machining, excellent chemical & corrosion resistance

Prefabrication

Introduction

As an example for prefabrication we show you an easy method using the well known malleable cast iron fittings. This method can be used as well for plastic piping systems.

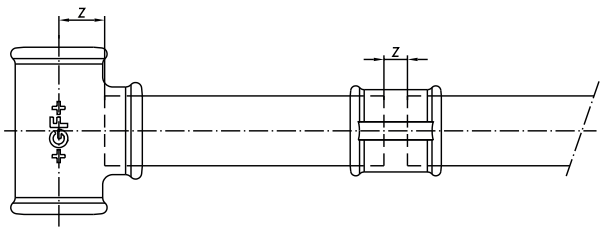
The z dimension installation method, developed by GF in conjunction with experienced installers of domestic and industrial piping systems, has been proving its worth for years in practical applications. The method offers a basis for efficient planning, preparation for work and preliminary assembly and can result in savings in time and effort:

- staff use can be reliably planned
- administrative work more easily completed
- calculation and costing simplified
- optimised machine use
- reduced storage requirement of own fittings and pipes
- optimisation of transportation the pipeline layout can easily be recognized by the pipeline diagram.

z dimension

The z dimension – also called «laying length» is the middle distance between

- installed pipe end and the axis of the fitting or
- the ends of two installed pipes



The z dimensions are calculated from the overall lengths less the average length of engagement. z dimensions were introduced by GF with a view to rational planning and preparation for work.

Requirements

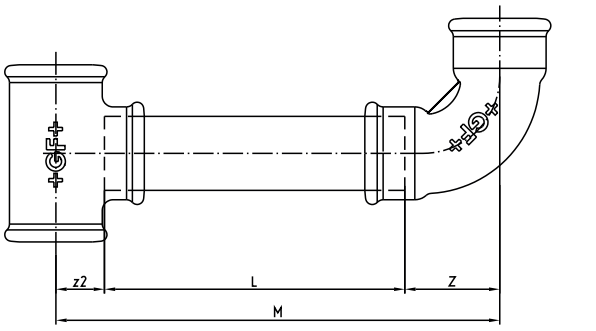
The z dimension method relies on:

- knowledge of the pipeline layout
- knowledge of the space requirements of valves, appliaces and their locations.
- coordination with architect, planner, works management and the other businesses who work may have an influence on the pipeline layout.
- use of fittings with consistant dimensional accuracy, such as GF's.
- Pipe threads conforming to standards, implying combined exact adjustment of the threading machine.

z dimension and measurement procedure

z dimension and uniform measuring procedure are the core of the GF installation method.
The z dimension is the pipe installers «design dimension». With its help he can easily calculate the exact pipe length between fittings and/or valves. The principle of forms the basis for determining and using the z dimension.

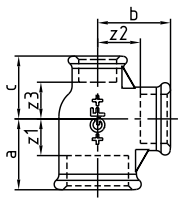
standardised measuring centre - centre = M



Pipe length L = M - (z2 + z)

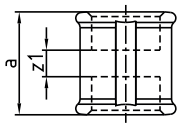
Prefabrication

The z dimension is calculated as the difference between «dimension face – middle» (a, b or c) and length of engagement of the pipe thread.

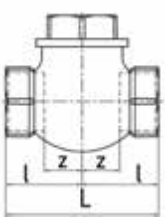


For fittings, e.g. tee no. 130, reduced branch and run:
z1 = a-length of engagement
z2 = b-length of engagement
z3 = c-length of engagement

The fitting's bead deliberately put on the GF fittings can be used as a measuring aid.



Exception – socket no. 270, 271:
z1 = a-2 length of engagement



For valves:
z = l – length of engagement
If the total overall length is indicated by L,the following applies:

z = L/2 – length of engagement

Pipe threads

Another precondition for using the GF z dimension method is that the pipes are cut with the correct standardised threads. This assures that all pipes with the connecting pieces can be screwed together equally far and the dimensions M taken asa base are also correct after installation.

The pipe thread must be cut clean and to EN 10226-1 standard (or ISO 7-1 with a taper of 1:16). The taper pipe thread also produces a strengthening of the pipe residual wall in the second half of the thread. Unequal thread lengths influence the centre-centre dimension M and have a negative effect particularly for straight section with several branches.

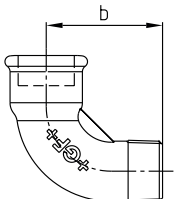
Note:
The centre-centre dimension (M) can show a permitted tolerance of ± 1/2 thread.

Length of engagement

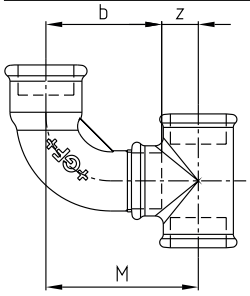
The nominal engagement length of the pipe external thread are (rounded values):

Joint size	Average length of engagement in mm
1/8	**7**
1/4	**10**
3/8	**10**
1/2	**13**
3/4	**15**
1	**17**
11/4	**19**
11/2	**19**
2	**24**
21/2	**27**
3	**30**
4	**36**

Prefabrication

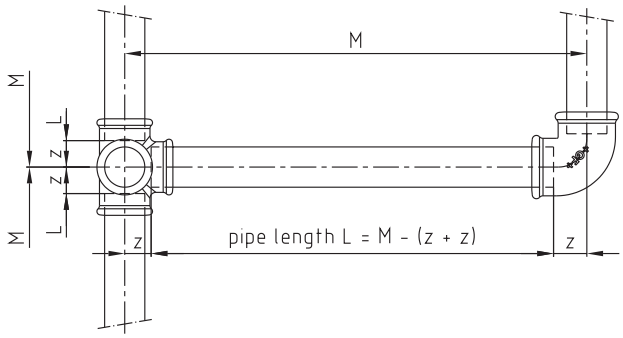


b is the distance of internal thread centre to face of the external thread.

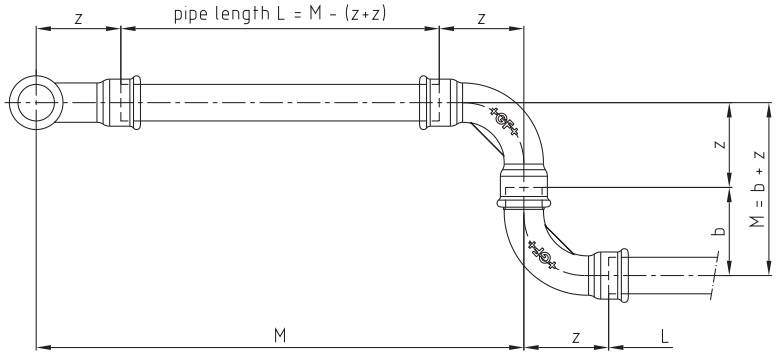


For fittings combinations with internal and external threads the sum of z + b produces the axial distance M:

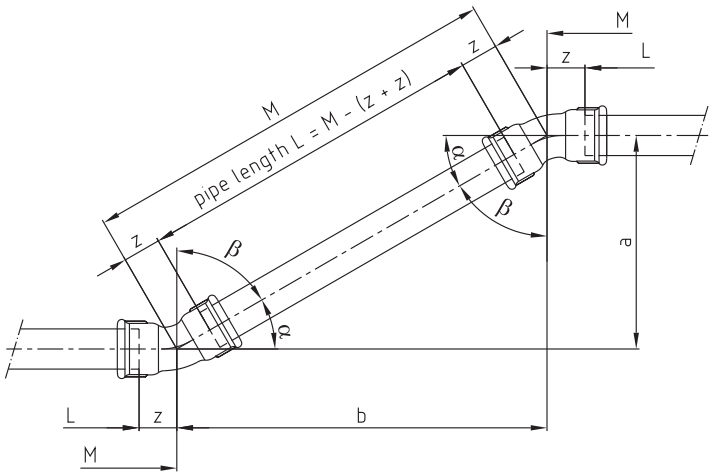
M = z + b



Principle of the z dimension installation method:
uniform measuring
centre - centre = M



Exact pipe thread lengths produce exact M dimensions.



The M dimension for sloping pipeline parts is easily calculated with the factor or numerical table.

Prefabrication

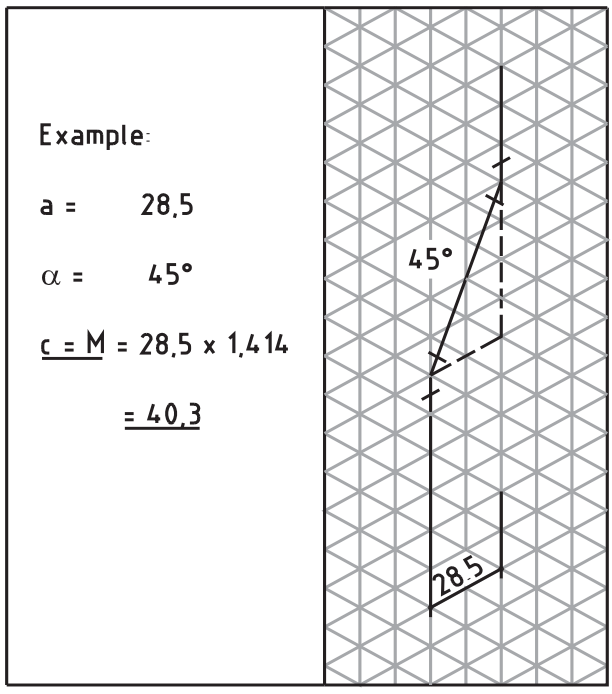
Parts of a pipeline diverging from the horizontal and verticals can only be accurately marked out in a few cases. Accurate results are obtained by rectangular measuring and determining the remaining (triangle) side lengths.

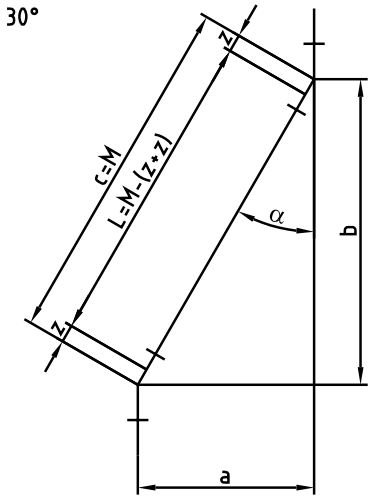
There are two possibilities for calculating the pipe lengths by means of the z dimensions:

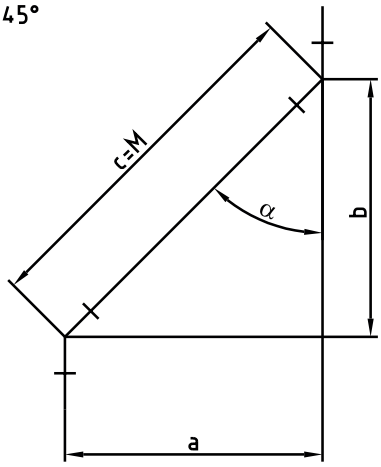
1. Factor table

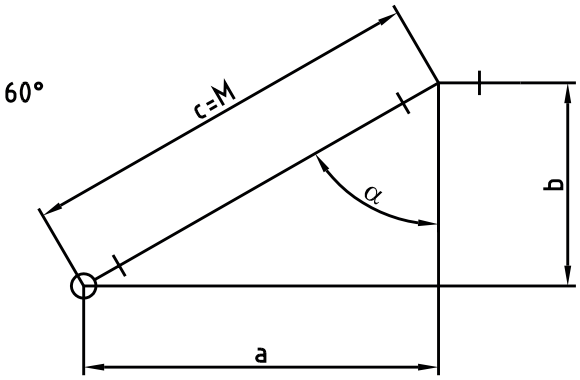
given:		a		b	
		Factor for		Factor for	
α	β	b	c = M	a	c = M
75°	15°	0,268	1,035	3,732	3,864
60°	30°	0,577	1,155	1,732	2,000
45°	45°	1,000	1,414	1,000	1,414
30°	60°	1,732	2,000	0,577	1,155
15°	75°	3,732	3,864	0,268	1,035

α = given angle
β = accompanying angle
angle-dependent factors multiplied with the given dimension a or b = sought dimensions b and c or a and c.





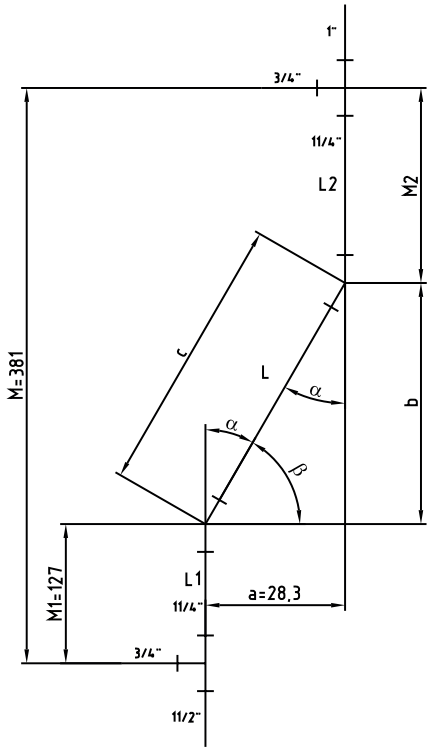




Prefabrication

2. Numerical table

Example:
Tier in a rising train of pipes. The dimensions M, M1 and a are taken on the site, the remainder are to be determined from the table.



Planned fittings (from bottom to top):
1 tee no. 130 - 11/2 x 3/4 x 11/4
2 bends no. 51 - 11/4
1 tee no. 130 - 11/4 x 3/4 x 1

The projection a is 28.3 cm = 283 mm. 283 consists of 3 + 80 + 200. In columns b and c we find the partial values belonging to 3, 80 and 200 for the perpendiculars b and the slopes c.

In this case lengths b and c result from adding up the partial values α = 30°, β = 60°.

a (known)	b	c
3 mm	5,2 mm	6 mm
80 mm	138,6 mm	160 mm
200 mm	346,4 mm	400 mm
283 mm	**490,2 mm**	**566 mm**
or a=28,3 cm	b=49,0 cm	c= 56,6 cm

Pipe length L = c - (2 x z dimension of bend no. 51 - 11/4)
z dimension bend = 33 mm
L = 56.6 - (2 x 3.3) = 56.6 - 6.6 = 50 cm

Pipe length L1 = M1 - (sum of the z dimension of tee piece no. 130 - 11/2 x 3/4 x 11/4 and bend no 51 - 11/4)
z dimension tee no. 130 (on 11/4 exit) = 17 mm
z dimension bend = 33 mm
L1 = 127 - (1.7 + 3.3) = 127 - 5 = 122 cm

M2 = M - (M1 + b), M1 = 127, b = 49
M2 = 381 - (127 + 49) = 381 - 176 = 205 cm

Pipe length L2 = M2 - (sum of the z dimensions of bend no. 51 - 11/4 and tee piece no. 130 - 11/4 x 3/4 x 1)
z dimension bend = 33 mm
z dimension tee no. 130 (on the 11/4 exit) = 17 mm
L2 = 205 - (3.3 + 1.7) = 205 - 5 = 200 c

Clear outlining of the pipework

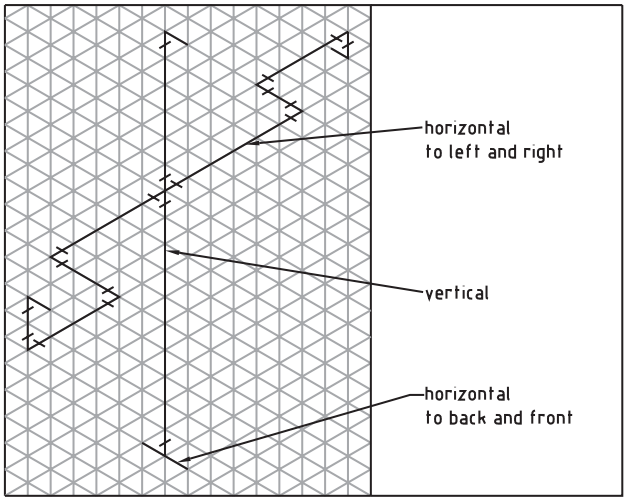
The isometric diagrams of pipes and horizontal projections are ideal for quick preparation when using the GF installation method.

The drawing of the pipework should be given in a simple but effective way. The diagrams can be sketched by the installer himself on the spot.

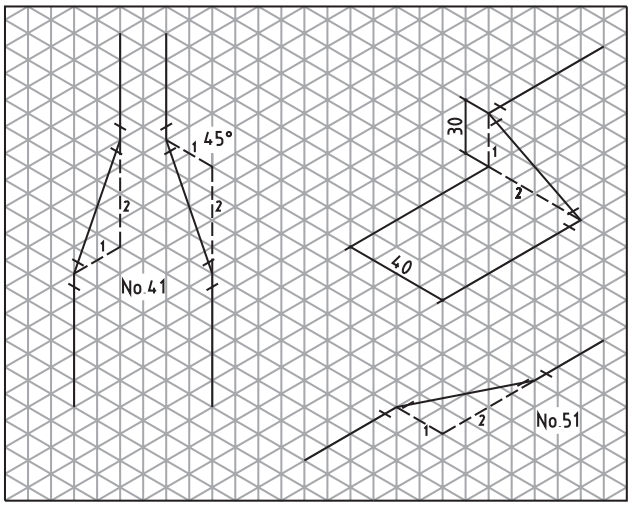
This type of representation enables quick outlining with no aids such as ruler, set square etc. either directly on the site of installation or according to a plan. The pipework system to be installed is alwaysclearly recognisable with all necessary fittings, valves etc.

The 30° pipeline diagram (3D plan) is intentionally not drawn to scale, i.e. long pipe sections are made shorter, short pipe sections are to a large extent made somewhat longer. In this way even extensive pipe systems can be represented on an A4 sheet of paper.

Pipelines running at right angles to each other are drawn as shown below:

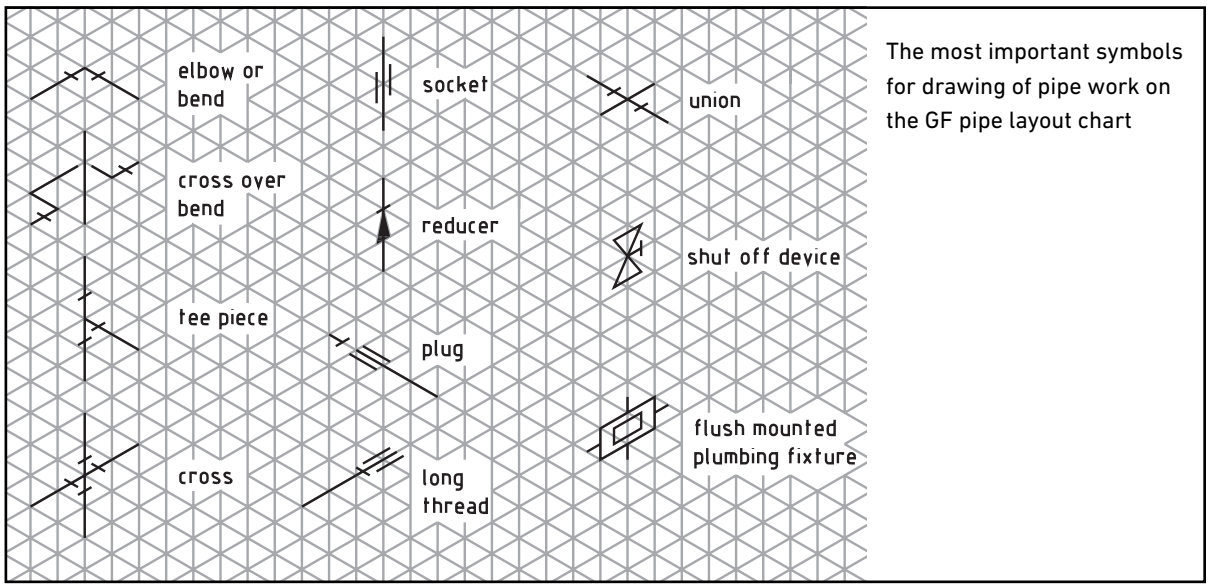


Pipelines sloping in relation to each other are drawn as shown in the example below:



Changes of direction are shown in the ratio of 2:1 or 1:2 irrespective of angles and dimensions. By drawing in the triangle as an aid the change of direction is set accurately. The divergence is established by giving the type of fitting (catalogue no. or angle) or by dimensioning.

Fittings and/or jointing points can be marked with a small dash, valves with the standardized symbols.



The most important symbols for drawing of pipe work on the GF pipe layout chart

The GF pipe layout chart

The 30° pipeline diagram can be drawn on the GF pipe layout chart, for example. The oblong format selected is particularly suitable for use on the site. The area available for sketching, either allows sections of pipelines to be portrayed, or even more extensive part installations (e.g. cellar quantization, floor distributers) to be reproduced.

The advantages of the GF pipe layout chart are obvious:

- division of the installation work
- quick drawing of the pipework diagram
- clear record of the centre - centre dimensions
- very simple pipe length calculation
- basis for a summary of pipe components
- costing document
- thus offering real rationalisation:
- measure, mark, cut into lengths and cut the thread for all pipes of the same diameter one after the other.
- If the project documents are saved, the pipe layout chart makes it possible to determine the pipeline layout exactly even years later. Extensions or repairs can be carried out considerably more easily.

Conclusions

The GF z dimension installation method is the tried and tested basis for the skilled worker and industrial prefabrication of pipework installations.

Its objective is to bring together the same repetitive production sequences to achieve a trouble-free flow of materials and work, to avoid idle time, minimise setting up time and doing the same work twice and provide the optimal solutions.

This calls for:

- division of the pipework systems in installation sections.
- division of production in pre-assembly (in the workshop or on site) and installation. It is avantageous to prepare as large a number of the installations as possible in the workshop.
- summarised record of all important site dimensions, to be able to carry out in series prefabrication.

A main rule for this:
Gather as many pipework sections as possible from the planning documents.

However, where sections must be decided on the spot (offsetting of variations in the dimensions of the solidium) the following applies:

Always measure where pipelines are to be laid.

The GF z dimension method enables:

- in series prefabrication
- rational use of material, skilled labour and machines
- reduction of installation times
- adaptability to building progress
- very large independence from building deadlines
- better preliminary conditions for carrying out non-local items
- better preliminary conditions for carrying out refurbishment work
- more accurate work with lower expenditure
- consistent quality

As a result of these advantages, installation planning, starting with the preliminary draft, should be included in the building plan. A prerequisiste of the rational running of building work is completed, co-ordinated planning of the implementation of work at its outset in its basic details.

Notes:

System overview INSTAFLEX

INSTAFLEX – the plastic piping system made of polybutene for applications in building services. Ideally suited for hot and cold water, cooling systems and compressed air. This system includes everything for conveying water from the basement to the tapping points.

Available in dimensions d16 – d315.

INSTAFLEX fits your application best

System solution

You benefit from the advantages of a system solution made of plastic for your installation from the building entry to the last tap. A single material from the basement to the roof.

Efficiency

You benefit from optimal cost. Prefabricated components reduces on-site time and costs.

Safety

You reap the benefits of having a permanently leak-proof and durable drinking water system.

Maintenance

The longevity of your drinking water system secures low maintenance.

Hygiene

INSTAFLEX made of polybutene provides safe and hygienic water.

Lifetime

Using INSTAFLEX, you benefit from the long lifespan of the material. Operating at 10 bar and 70°C, this system is designed for 50 years lifespan - the equivalent of two generations.

Solvent-free

INSTAFLEX is a solvent free ideal for drinking water system. During normal operation, the smooth pipe surface prevents deposits.

Corrosion-free

Installing INSTAFLEX, you have the advantages of a corrosion free drinking water system. Even during prolonged stagnation times no rusty water.

Life cycle assessment

Installing INSTAFLEX, you use the advantages of a material that can be fully recycled and has a low carbon footprint.

Linear ball valve type 546 PVC-C
With mounting inserts
With PB INSTAFLEX sockets metric

Model:

- Excellent control characteristics
- Designed for easy installation and removal
- Ball seals PTFE
- Angle of operation 90° with scale
- Integrated stainless steel mounting inserts

Option:

- Individual configuration of the valve (see diagram)
- Pneumatic or electric actuators from GF
- Other materials on demand

Metal - butterfly valve type 039M
With hand lever

Model:

- Body GGG40 (A 395 M:88, EN-JS 1020 EN1563) Rilsan coating
- Seat material: EPDM, FKM and others on request
- Full bore shaft, square shape
- Installation length: EN 558 row 20
- Mounting between ISO, ANSI, BS or JIS Flanges
- Interface according to DIN/ISO 5211
- Also available: gearbox with handwheel, electric-, pneumatic actuated

Safety valve JRGARANT, reaction pressure 6 bar

For closed model water heater, inlet with male thread, outlet with female thread.
Body made of gunmetal, upper part made of plastic, factory setting of operating pressure for the safety valve.
Upper part to 1025 see 1045, water dropping nipple to 1025 see 8223.

Profile flange gasket metric
For flange adaptors without chamfer

Model:

- For flange adaptor No. 27 79 85 PP-H SDR11 without chamfer
- Profile Gasket with carbon steel insert (type G-ST-P/K)
- Hardness: 70° shore **EPDM**, 75° shore **FKM**

Profile flange gasket metric
For flange adaptors without chamfer

Model:

- For flange adaptor No. 27 79 85 PP-H SDR11 without chamfer
- Profile Gasket with carbon steel insert (type G-ST-P/K)
- Hardness: 70° shore **EPDM**, 75° shore **FKM**

UNI-Flex L PN16

Model:

- Housing, Bars and Strip insert (option): Stainless Steel W5 (1.4571) Quality

Temperature/Pressure:

- Operating temperature EPDM: -30°C to 125°C
- Operating temperature NBR: -20°C to 80°C

Option:

- Sealing type Viton on request

Remark:

- **For safe installation on pipes insert stiffeners are mandatory**

MSA 2 MULTI Automatic Electrofusion Unit for PE/PP/PVDF/PB

The MSA 2 MULTI automatic electro fusion unit combines light weight and high efficiency, thanks to its inverter technology. The unit is suitable for welding PE, PP, INSTAFLEX PB d125-225, Fuseal d1 1/2"-12" and PPro-Seal 1/2"-3".
It is robust, safe and ergonomic.
All is meant to simplify the job: the barcode scanner, for long distance reading, the cooling system to joint in series, the icon system, to keep the interaction between user and machine intuitive.
The entire welding process is controlled and regulated with energy output compensation depending on ambient temperature and the indication of cooling time.
The unit has 500 protocols permanently stored in the internal memory. The user can copy the fusion reports in an USB stick to print them out in PDF format.
Scope of delivery includes: 1 pair of angle adapter clips 4.0 mm, operating instructions, START/STOP badge, USB memory stick and robust transport case

Technical Data:

- Operating temperature: -20°C to +50°C
- Fusion data input mode: bar code, manual
- Mains voltage: 230V (190V - 265V)
- Mains frequency: 50-60 Hz
- Fittings range: d16-630 mm , 1/2"-12"
- Fusion voltage: 3.6-40 V
- Fusion current: 90 A (max)
- Suggested power generators: 3.5 kVA
- USB Port: Type A
- Protection factor: Class 1 / IP 65
- Mains cable: 4 m
- Fusion cable: 3 m
- Weight: ca. 11.9 kg
- Display: Graphical LCD, adjustable contrast

IM 315
Butt fusion machine for industrial applications

- Butt fusion machine for PP, PE, PB and PVDF pipes and fittings for industrial applications with pressure piping systems.
- Extremely sturdy design for use in the workshop and on job sites.
- Designed to provide the highest flexibility to adapt to different sizes or shapes of fittings.
- Angular jointing provided up to 30° (2x15°) for prefabrication of segmented fittings.
- Dimensional range: d90-315 mm, from SDR 41 up to SDR 11 with PE,PP d315 mm
- 115 V on request!
- **BASE MACHINE**
- High precision, distortion-free and robust machine base
- Integrated swivel tables for angular jointing up to 30° (2x15°)
- Handwheel for easy moving of machine carriage
- Exact pressure adjustment via direct spring load transfer
- Fusion pressure is maintained with a user friendly fast-locking handle
- Inner left and right clamping elements, for picking up reduction clamping inserts d 90-315 mm, with fast-locking handle
- Optional outer, horizontally removable clamping devices available
- Weight (including planer and heater): 169 kg
- **PLANER**
- Optimized cutting geometry for even and chatter-free planing
- Swivel mounted for ergonomic handling
- Mechanical stop to provide single sided planing and defined facing depth
- Integrated safety switch to prevent unintentional start-up
- Self-locking mechanism in working position
- **HEATER**
- High-performance and precision heater with electronic temperature control (2500W)
- High accuracy of +/- 4°C over the entire heating surface
- High quality, non-stick PTFE coating
- Pull-off mechanism to automatically detach the heating plate from pipe ends
- Metal sheet cover to protect the heating plate in idle position
- Integrated thermometer for fast visual check of plate temperature
- **ADDITIONAL STANDARD EQUIPMENT**
- Reduction clamping inserts set d 90-315 mm
- Pipe supports for picking up reduction supporting inserts d 90-315 mm
- Reduction pipe supporting inserts set d 90-315 mm
- Timer to clock fusion times
- Machine specific tool set

d-d (mm)	Performance	Description	Code	SP	Weight (kg)

90 - 315	230 V / 3500 W	With standard transport crate	**790 143 001**	0	269.000
90 - 315	230 V / 3500 W	With special transport crate	**790 143 003**	0	366.000

TOP 2.0 400 - 500 - 630
Butt fusion machine for construction site

Butt Fusion machine to joint PE, PP, PB pipes and fittings for pressure piping systems on building sites and in trenches.
Hydraulically operated with manual control unit.
TOP hydraulic unit with integrated control panel and power outlets.
Including transport packaging (wooden crate); reduction clamping inserts and other accessories to be ordered separately.

- **BASE MACHINE**
- High precision design, distortion-free and sturdy machine frame
- Good accessibility thanks to 45° inclination
- The movable (sliding) 3rd clamp allows easy and time-saving fixation of bends or tees without need of additional tools
- Double-sided heating element pull-off mechanism to optimise the change-over phase
- Weight: Type 400 = 80 kg, Type 500 = 157 kg, Type 630 = 222 kg
- **HYDRAULIC UNIT**
- Compact aluminium case with innovative design
- Intuitive control panel provided with digital indication of hydraulic pressure, electronic heating element temperature controller, 2-channel welding timer
- Automatic pressure control during the cooling time
- Precise pressure setting and fine adjusting
- Push-button operation of machine carriage
- Integrated power outlets for planer, heating element
- Accumulator for pressure equalization during the cooling phase
- Integrated interface for welding recorder
- Max operating pressure: Type 400 = 160 bar, Type 500 - 630 = 200 bar
- Weight: 34 kg
- **PLANER**
- Powerful parallel planer for single or double-sided facing of pipe ends
- Ergonomic, weight-balanced handling
- Self-locking mechanism in working position
- Safety microswitch to prevent undesired start-up
- Weight: Type 400 = 47 kg, Type 500 = 58 kg, Type 630 = 99 kg
- For Type 500 a special version is available, with enhanced performance to work with PP pipes and fittings up to d 500 mm SDR 11
- **HEATING ELEMENT**
- High performance, electronically controlled heating element
- High-quality, non-stick PTFE-coating with long service life
- Temperature indicator integrated into the handle
- Weight: Type 400 = 16 kg, Type 500 = 26 kg, Type 630 = 39 kg
- Input power: Type 400 = 3.5 kW, Type 500= 4.0 kW, Type 630 = 8.0 kW
- **CASE**
- For safe storage of planer and heating element
- Weight: Type 400 = 30 kg, Type 500 = 38 kg, Type 630 = 62 kg

iFIT

System overview iFIT

iFIT – the innovative push fit jointing system for heating and plumbing with a safety check you can see and hear. Never before have polybuten and multilayer pipes been so easy, fast and safe to install in the dimensions 16, 20, 25 and 32.

Working with iFIT

Technical Data

Pressure loss chart iFIT (10 °C)

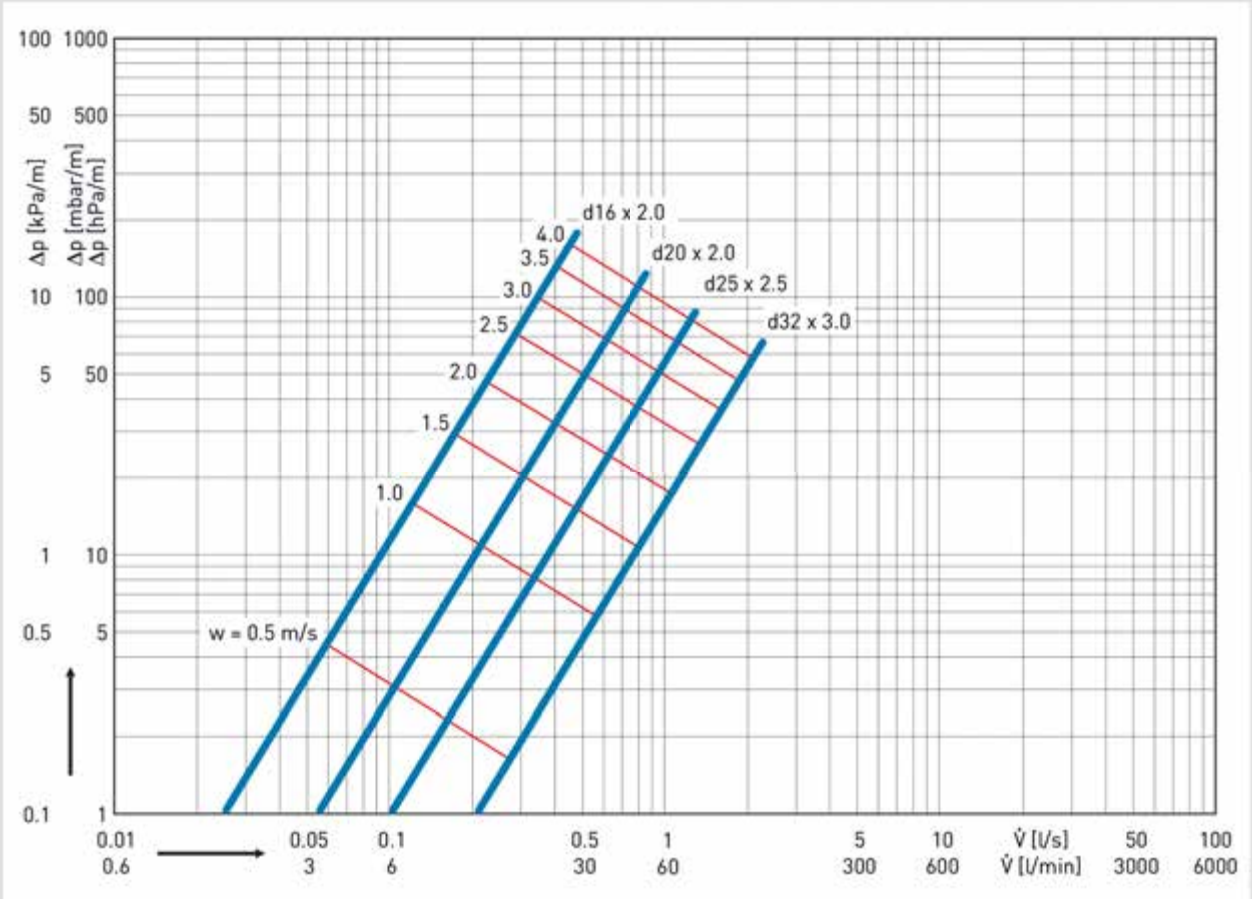
Pressure loss chart for iFIT PB- and ML pipes:

Pipe friction loss in relation to flow rate

Basis of calculation:	
Water temperature	= 10°C
Surface roughness k	= 0.007 mm
Viscosity	= 0.00131 Pa·s
Density ρ	= 999.70 kg/m³

Recommended flow velocity according SVGW guideline W3/2013:

max. 4.0 m/s for single outlet lines
max. 3.0 m/s for apparatus lines
max. 3.0 m/s for floor distribution lines
max. 2.0 m/s for distribution lines



Technical Data

Pressure loss chart iFIT (60 °C)

Pressure loss chart for iFIT PB- and ML pipes:

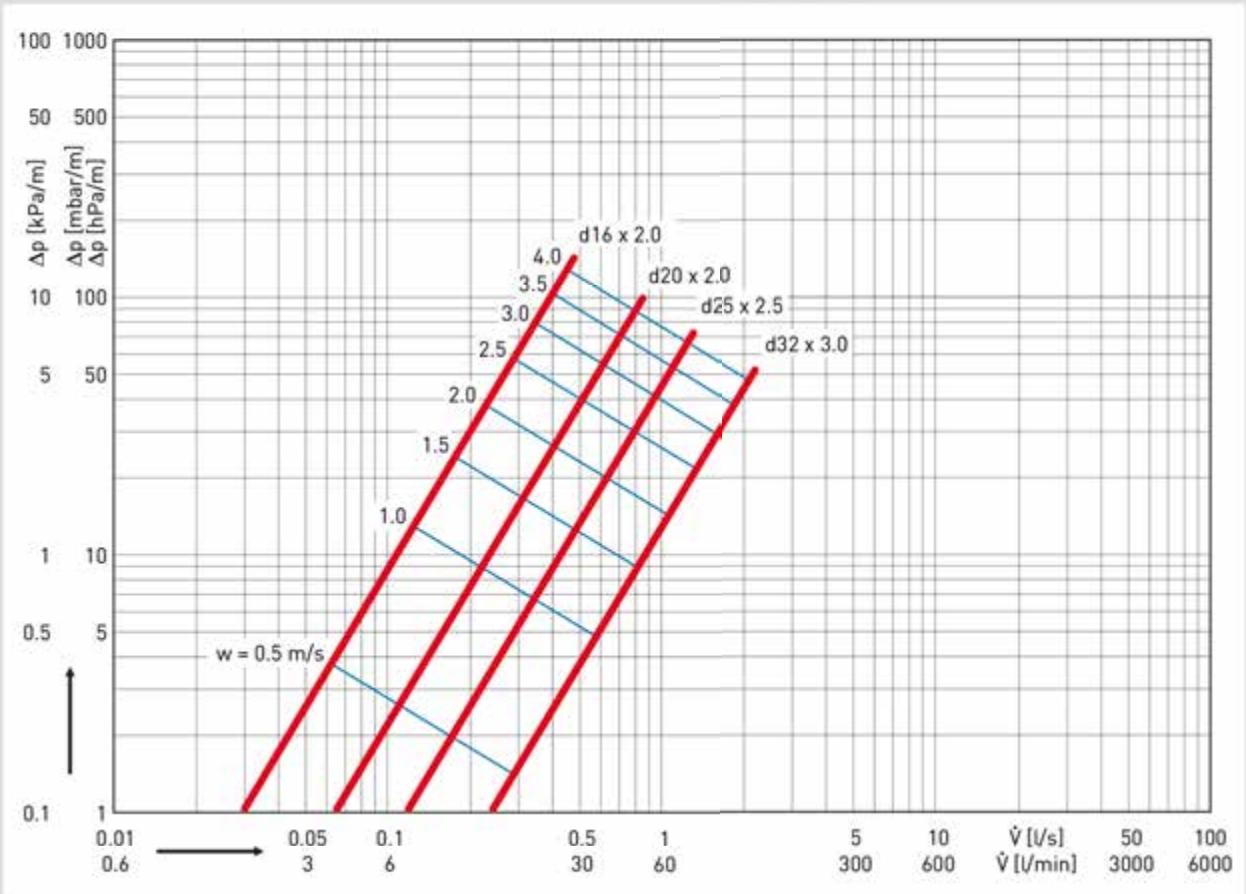
Pipe friction loss in relation to flow rate

Basis of calculation:

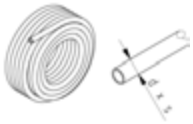
Water temperature	= 60°C
Surface roughness k	= 0.007 mm
Viscosity	= 0.00013 Pa-s
Density ρ	= 983.19 kg/m³

Recommended flow velocity according SVGW guideline W3/2013:

max. 4.0 m/s for single outlet lines
max. 3.0 m/s for apparatus lines
max. 3.0 m/s for floor distribution lines
max. 2.0 m/s for distribution lines



Pipes



Polybutene pipe (coiled)

Packed in cardboard boxes
PB pipe in coils without protective pipe
Without oxygen barrier

General Condition of Supply of Georg Fischer Piping Systems Limited, Schaffhausen

1 General

1.1 These General Conditions shall apply to all Products supplied by Georg Fischer Piping Systems Limited («Georg Fischer») to the Purchaser.
They shall also apply to all future business even when no express reference is made to them.

1.2 Any deviating or supplementary conditions especially Purchaser's general conditions of purchase and verbal agreements shall only be applicable if accepted in writing by Georg Fischer.

1.3 The written form shall be deemed to be fulfilled by all forms of transmission, evidenced in the form of text, such as telefax, e-mail, etc.

2 Tenders

Tenders shall only be binding if they contain a specifically stated period for acceptance.

3 Scope of Delivery

3.1 Georg Fischer's product range is subject to change.

3.2 The confirmation of order shall govern the scope and execution of the contract.

4 Data and Documents

4.1 Technical documents such as drawings, descriptions, illustrations and data on dimensions, performance and weight as well as the reference to standards are for information purposes only. They are not warranted characteristics and are subject to change.

4.2 All technical documents shall remain the exclusive property of Georg Fischer and may only be used for the agreed purposes or as Georg Fischer may consent.

5 Confidentiality, Protection of Personal Data

5.1 Each party shall keep in strict confidence all commercial or technical information relating to the business of the other party, of which it has gained knowledge in the course of its dealing with the other party. Such information shall neither be disclosed to third parties nor used for other purposes than those for which the information has been supplied.

5.2 In the context of the contractual relation with the Purchaser personal data may be processed. The Purchaser agrees to the disclosure of said data to third parties such as foreign subcontractors and suppliers etc .

6 Local Laws and Regulations, Export Controls

6.1 The Purchaser shall bring to the attention of Georg Fischer all local laws and regulations at the place of destination which bear connection with the execution of the contract and the adherence to relevant safety regulations and approval procedures.

6.2 In case of re-exports, Purchaser shall be responsible for compliance with pertinent export control regulations.

7 Price

7.1 Unless agreed otherwise, the prices shall be deemed quoted net ex works (according to Incoterms 2010 of the ICC, or latest version) including standard packing. All supplementary costs such as the cost of carriage, insurance, export-, transit- and import- licences etc. shall be borne by the Purchaser. The Purchaser shall also bear the costs of all taxes, fees, duties etc. connected with the contract.

7.2 If the costs of packing, carriage, insurance, fees and other supplementary costs are included in the tender price or contract price or are referred to specifically in the tender or confirmation of order, Georg Fischer reserve the right to revise their prices accordingly should any change occur in the relevant tariffs.

8 Terms of Payment

8.1 The Purchaser shall make payment in the manner agreed by the parties without any deductions such as discounts, costs, taxes or dues.

8.2 The Purchaser may only withhold or off-set payments due against counter claims which are either expressly acknowledged by Georg Fischer or finally awarded to the Purchaser.
In particular, payment shall still be made when unessential items are still outstanding provided that the Products already delivered are not rendered unusable as a result.

9 Retention of Title

9.1 The Products shall remain the property of Georg Fischer until the Purchaser shall have settled all claims, present and future, which Georg Fischer may have against him.

9.2 Should the Purchaser resell Products to which title is reserved, in the ordinary course of business, he shall hereby be deemed to have tacitly assigned to Georg Fischer the proceeds deriving from their sale together with all collateral rights, securities and reservations of title until all claims held by Georg Fischer shall have been settled. Until revoked by Georg Fischer, this assignment shall not preclude Purchaser's right to collect the assigned receivables.

9.3 To the extent the value of the Products to which title is reserved together with collateral securities exceeds Georg Fischer's claims against the Purchaser by more than 20%, Georg Fischer shall re-assign the above proceeds to Purchaser at his request.

10 Delivery

10.1 The term of delivery shall commence as soon as the contract has been entered into, all official formalities such as import and payment permits have been obtained and all essential technical issues have been settled. The term of delivery shall be deemed duly observed when, upon its expiry, the Products are ready for despatch.

10.2 Delivery is subject to the following conditions, i.e. the term of delivery shall be reasonably extended:

a) if Georg Fischer are not supplied in time with the information necessary for the execution of the contract or if subsequent changes causing delays are made by the Purchaser.

b) if Georg Fischer are prevented from performing the contract by force majeure. Force majeure shall equally be deemed to be any unforeseeable event beyond Georg Fischer's control which renders Georg Fischer's performance commercially unpractical or impossible, such as delayed or defective supplies from sub contractors labour disputes, governmental orders or regulations, shortages in materials or energy, serious disturbances in Georg Fischer's works, such as the total or partial destruction of plant and equipment or the breakdown of essential facilities, serious disruptions in transport facilities, e.g. impassable roads.
Should the effect of force majeure exceed a period of six (6) months, either party may cancel the contract forthwith.
Georg Fischer shall not be liable for any damage or loss of any kind whatsoever resulting the refrom, any suspension or cancellation being without prejudice to Georg Fischer's right to recover all sums due in respect of consignments delivered and costs incurred to date.

c) if the Purchaser is in delay with the fulfilment of his obligations under the contract, in particular, if he does not adhere to the agreed conditions of payment or if he has failed to timely provide the agreed securities.

10.3 If for reasons attributable to Georg Fischer the agreed term of delivery or a reasonable extension thereof is exceeded, Georg Fischer shall not be deemed in default until the Purchaser has granted to Georg Fischer in writing a reasonable extension thereof of not less than one (1) month which equally is not met.
The Purchaser shall then be entitled to the remedies provided at law, it being however understood that, subject to limitations of Art. 16, damage claims shall be limited to max. 10% of the price of the delayed delivery.

10.4 Part shipments shall be allowed and Georg Fischer shall be entitled to invoice for such partial deliveries.

10.5 If the Purchaser fails to take delivery within a reasonable time of Products notified as ready for despatch, Georg Fischer shall be entitled to store the Products at the Purchaser's expense and risk and to invoice them as delivered. If Purchaser fails to effect payment, Georg Fischer shall be entitled to dispose of the Products.

10.6 Should Purchaser cancel an order without justification and should Georg Fischer not insist on the performance of the contract, Georg Fischer shall be entitled to a penalty amounting to 10% of the contract price, Georg Fischer's right to prove and claim higher damages remaining reserved. Purchaser shall be entitled to prove, that Georg Fischer has suffered no or a considerably lower damage than the penalty forfeited.

11 Packing

If the Products are provided with additional packing over and above the standard packing, such packing shall be charged additionally.

12 Passing of Risk

12.1 The risk in the Products shall pass to the Purchaser as soon as they have left Georg Fischer's works (EX WORKS, Incoterms 2010 ICC, or latest version), even if delivery is made carriage-paid, under similar clauses or including installation or when carriage is organized and managed by Georg Fischer.

12.2 If delivery is delayed for reasons beyond Georg Fischer's control, the risk shall pass to the Purchaser when he is notified that the Products are ready for despatch.

13 Carriage and Insurance

13.1 Unless agreed otherwise, the Purchaser shall bear the cost of carriage.

13.2 The Purchaser shall be responsible for transport insurance against damage of whatever kind. Even when such insurance is arranged by Georg Fischer it shall be deemed taken out by the order of and for the account of the Purchaser and at his risk.

13.3 Special requests regarding carriage and insurance shall be communicated to Georg Fischer in due time. Otherwise carriage shall be arranged by Georg Fischer at their discretion, but without responsibility, by the quickest and cheapest method possible.
In case of carriage-paid delivery transport arrangements shall be made by Georg Fischer. If the Purchaser specifies particular requirements, any extra costs involved shall be borne by him.

13.4 In the event of damage or loss of the Products during carriage the Purchaser shall mark the delivery documents accordingly and immediately have the damage ascertained by the carrier. Not readily ascertainable damages sustained during carriage shall be notified to the carrier within six (6) days after receipt of the Products.

14 Inspection, Notification of Defects and Damages

14.1 The Products will be subject to normal inspection by Georg Fischer during manufacture. Additional tests required by the Purchaser shall be agreed upon in writing and shall be charged to the Purchaser.

14.2 It shall be a condition of Georg Fischer's obligation under the warranties stated hereinafter that Georg Fischer be notified in writing by the Purchaser of any purported defect immediately upon discovery. Notice concerning weight, numbers or apparent defects is to be given latest within 30 days from receipt of the Products, notice of other defects immediately latest within seven (7) working days after discovery, in any event within the agreed warranty period.

14.3 Purchaser shall not dispose of allegedly defective Products until all warranty and/or damage claims are finally settled. At its request, defective Products are to be placed at Georg Fischer's disposal.

14.4 At its request, Georg Fischer shall be given the opportunity to inspect the defect and/or damage, prior to commencement of remedial work, either itself or by third party experts.

15 Warranty

15.1 At the written request of the Purchaser, Georg Fischer undertakes to repair or replace at its discretion, as quickly as possible and free of charge, all Products supplied which demonstrably suffer from faulty design, materials or workmanship, from faulty operating or installation instructions or which become defective or unusable due to faulty advice.
In order to protect employees from toxic or radioactive substances which may have been transported through defective parts returned to Georg Fischer's sales organisation, said parts must be accompanied by a Material Safety Disclosure Form. The form may be obtained from Georg Fischer's local sales company or via www.piping.georgfischer.com.
Replaced parts shall become property of Georg Fischer, unless Georg Fischer waives such claim.

15.2 For Products which are manufactured to specifications, drawings or patterns supplied by the Purchaser, Georg Fischer's warranty shall be restricted to proper materials and workmanship.

15.3 The Purchaser shall be entitled to rescind the contract or to demand a reduction of the contract price if
- the repair or replacement of the defective Product is impossible
- the defective Product is not repaired or replaced within a reasonable period
- Georg Fischer refuses the repair or replacement or if for reasons attributable to Georg Fischer the repair or replacement is delayed.

15.4 For Products or essential components manufactured by a third party and supplied by Georg Fischer under this contract, Georg Fischer's warranty is limited to the warranty provided by said third party.

15.5 This warranty shall not apply to damage resulting from normal wear and tear, improper storage and maintenance, failure to observe the operating instructions, overstressing or overloading, unsuitable operating media, unsuitable construction work or unsuitable building ground, improper repairs or alterations by the Purchaser or third parties, the use of other than original spare parts and other reasons beyond Georg Fischer's control.

15.6 No action or claim may be brought by the Purchaser on account of any alleged breach of warranty or any other obligation of Georg Fischer after the expiration of twelve (12) months from receipt of the Products by the end user or at the latest within eighteen (18) months of the Products being despatched by Georg Fischer.

15.7 In case of Products for use in domestic installations or in utilities
- Georg Fischer will assume the costs of dismantling the defective Product and restoring the damaged object up to CHF 1'000'000 per occurrence.
- warranty or damage claims - contrary to Section 15.6 – are time-barred five (5) years from the date of installation or seven (7) years from the production date, whichever is earlier.

16 Limitation of Liability

The rights and remedies of the customer shall be exclusively governed by these General Conditions of Supply and shall be in lieu of any remedies at law. All further claims for damages, reduction of the purchase price, termination of or rescission of the contract are excluded.
In no case whatsoever shall the customer be entitled to claim damages other than compensation for costs of remedying defects in the supplies. This in particular refers, but shall not be limited, to loss of production, loss of use, loss of orders, loss of profit, third party recovery claims and other direct or indirect or consequential damages.
This limitation of liability equally applies to the extent Georg Fischer is liable for acts or omissions of its employees or third parties engaged for the performance of its obligations. It does not apply in case unlawful intent or gross negligence on the part of Georg Fischer's management and in case of Georg Fischer's statutory liability, in particular under applicable product liability laws.

17 Severability

Should any term or clause of these General Conditions in whole or in part be found to be unenforceable or void, all other provisions shall remain in full force and effect and the unenforceable or void provision shall be replaced by a valid provision, which comes closest to the original intention of the unenforceable or invalid provision.

18 Place of Performance and Jurisdiction

18.1 Place of performance for the Products shall be the Georg Fischer works from which the Products are despatched.

18.2 The contract shall be governed by Swiss law without regard to conflict of law provisions that would require the application of another law.

18.3 Any civil action based upon any alleged breach of this contract shall be filed and prosecuted exclusively in the courts of Schaffhausen, Switzerland.
Georg Fischer however reserves the right to file actions in any court having jurisdiction over controversies arising out of or in connection with the present contract.
